2022 DUST CONTROL PROGRAM APPLICATION

FAQ

The truck will only spray what has been purchased. If you aren't sure of the flag placement, make sure both flags are placed at good starting points.

For example, the spray truck may be coming from the North and your flag to the North side is placed in such a way that the footage purchased will stop before reaching the South flag. You may want to move your North flag farther South if this is not the area you are most concerned about.

You need to account for the driver coming from either direction so that the area you most want sprayed is done. Even if the flags are too close you will get what was purchased and this way you will get it where you want it.

In order to keep our surfaced roads clear of additional over spray and drag over, we will not spray up to the edges of surfaced roads, nor will we spray the radiuses where dust control meets another road.

Mail completed form and check to:
